

PRODUCT SERVICES

PROVIDE REALTIME REMOTE MONITORING

TerraGrow can provide monitor plant conditions, temperature, humidity, pH, and plant nutrition through mobile or web applications.

DATA COLLECTION

TerraGrow boasts a remarkable feature of being highly adjustable, allowing users to customize it to their specific needs. Its user-friendly interface ensures effortless operation, making it accessible to users of all levels of expertise.

VERSATILE CONNECTIVITY

TerraGrow can adapt versatile connectivity options, enabling seamless integration such as Wi-Fi, LoRa, and other IoT protocols. This flexibility based on their preferences and specific environmental conditions, ensuring a robust and adaptable system for plant monitoring and irrigation.

ABOUT US

TerraGrow is a cutting-edge and sustainable platform that combines state-of-the-art technology and advanced agricultural practices to revolutionize plant monitoring and irrigation. Harnessing the power of the Internet of Things (IoT).

TerraGrow enables real-time monitoring of plant health and environmental conditions, providing actionable insights for optimal crop management. The platform's ergonomic design ensures user comfort during operation, while the intuitive interface makes it easy to use for users of all expertise levels. Moreover, **TerraGrow** is an affordable solution, making sustainable farming accessible to a wider audience.

TerraGrow was created and conceptualized at the Electrical Engineering Lab at Universitas Mercu Buana, calibrated and researched with precision and completeness, making TerraGrow a tool that changes the IoT industry in agriculture

Sensor Accuracy

Real-time alignment in **TerraGrow** occurs because the system can monitor and adjust various parameters automatically and continuously. This is made possible through the use of sensors, software and hardware that are interconnected and integrated in the system.
